Emergency Fall Detection

Because Home Should Never Be a Risk

Why Does It Matter?

Every year, millions of elderly people fall alone at home. Many don’t break a bone, they break time. The difference between recovery and permanent disability is often how fast someone finds them.

Actual Problem

01 Falls are the #1 cause of injury related death in the elderly

02 Basic health kits in 3 adults over 65 falls every year

03 Most falls happen at home, not in hospitals or public spaces

Building Context Aware Fall Safety

Powered by IoT Intelligence + Passive RFID Wearables

We go beyond motion detection. Our wearable uses IoT and passive RFID to confirms real emergencies, reduces false alarms, and ensures faster, more reliable responses for elderly users, families, and care providers.

- Battery-Free Environment Mapping
- Smart Reader Gateway
- Scalable Care Platform

1

Threat of New Entrants

2

Bargaining Power of Suppliers

3

Bargaining Power of Buyers

4

Threat of Substitute Products or Services

5

Competitive Rivalry Among Existing Competitors

PORTER’S FIVE FORCES ANALYSIS

1.Threat of New Entrants : Medium

Why Entry Is Easy

- Simple mobile apps can detect emergency keywords
- Smartphones already have GPS, mic, and calling features
- Startups can build demos quickly

Why Survival Is Hard

- Trust & credibility critical in life-safety systems
- Regulatory compliance and legal liability
- 24/7 operational reliability required
- False alarm reduction and multilingual support
- High scaling and marketing costs
- Switching costs increase over time

2. Bargaining Power of Suppliers (Low to Medium)

Key Suppliers

- Cloud service providers (e.g., AWS, Google Cloud, Azure).
- Hardware and sensor manufacturers (wearables, microphones, GPS).
- Telecom and internet service providers.
- Mapping and location service providers.

Factors Influencing Supplier Power

Reducing Power

Multiple alternative vendors for cloud and AI, commoditized hardware, and open-source tools.

Increasing Power

Critical need for high-accuracy AI and reliable cloud uptime, potential for vendor lock-in via proprietary APIs.

3. Bargaining Power of Buyers (Medium)

Multiple Buyer segments

- Families of elderly users
- Hospitals & old-age homes
- Insurance companies

Key Factors

- Price sensitive (monthly subscriptions, fixed budgets)
- Many alternatives available (wearables, apps, medical alert devices)
- Switching cost low initially, increases with stored data & emotional reliance
- Bulk buyers can negotiate pricing and customization
- Safety and trust reduce aggressive price bargaining

4.Threat of Substitutes: (High)

Major Substitutes

- Traditional medical alert pendants (PERS).
- Smartwatches & other SOS wearables.
- Generic smartphone emergency applications.
- Smart home IoT monitoring systems.
- Community caregiving networks.

Impact

- Many substitutes offer similar core functionalities.
- Some alternatives are more affordable and simpler to use.
- Users may perceive little differentiation among options.

5.Competitive Rivalry Among Existing Competitors (High)

MAJOR FACTORS

- Many competitors targeting the same customers
- Similar core features across products
- Competition based on accuracy and speed
- High importance of trust and reputation

IMPACT

- Intense market competition
- Low product differentiation
- Pressure to improve quality and reliability
- Strong focus on brand image and certifications
- Constant need for technological upgrades
