Users and Customers

Primary Users
- Elderly individuals (60+)
- Seniors living alone
- Post-surgery patients

Decision Makers
- Family caregivers
- Hospitals

Problems

- 1 in 3 elderly individuals fall each year.
- Slow assistance increases injury severity and mortality.
- SOS-based solutions require user action during emergencies.
- Camera systems raise privacy concerns

Solutions Today

- Smartwatch fall detection
- SOS pendants
- Medical alert buttons
- CCTV monitoring
- Emergency mobile apps

Limitations:
- False alarms
- Manual activation
- Weak context detection
- Poor institutional integration

Solution Ideas

- AI multi-sensor fall detection
- On-device ML for fewer false alarms
- Smartphone + home hub support
- Caregiver cloud dashboard
- Institution monitoring console
- Encrypted emergency alerts

How will users get value using your solution?

- Automatic fall detection and emergency alerts.
- Faster response (<30s target).
- Reduced false alarms.
- Peace of mind for families.
- Privacy-safe monitoring.
- Improved remote elderly care.

User Metrics

• Detection accuracy (%)
• False alarms per user/month
• Alert response time (seconds)
• Monthly active users
• Caregiver satisfaction score

Budget

Estimated Initial Investment: ₹10 Lakhs

Allocation:
- Prototype development
- Hardware manufacturing
- AI & firmware development
- Mobile app + cloud platform
- RFID infrastructure
- Regulatory compliance
- Research and Development

Business Challenges

- Competition from smartwatches and wearables.
- Healthcare regulatory approvals.
- Trust building in healthcare sector.
- Price sensitivity in B2C market.
- Long hospital procurement cycles.
- Maintaining high detection accuracy.

Business Benefits and Metrics

- Devices sold
- Monthly subscription revenue
- Institutional contracts signed
- Customer acquisition cost (CAC)
- Customer lifetime value (LTV)
- Churn rate
- Reduced emergency response time
- Pilot-based hospitalization reduction data
