CERTIFICATE

This is to certify that the project report on "Omni Solutions — 3C31_4" being submitted by Akshat Nathani, Jivitesh Bansal, Ketanpreet Singh, Tarandeep Kaur, Jasman Kaur, and Farhan Kazi to the Venture Lab, Thapar Institute of Engineering and Technology, Patiala for the fulfillment of the course requirement of INNOVATION & ENTREPRENEURSHIP (UTA012) is a bonafide record of work carried out by us in conformity with the rules and regulations of the institute.

No other University or Institute has received the results in this report, either in whole or in part, for the purpose of awarding a degree or diploma.

ACKNOWLEDGMENT

A lot of people had to help me and give me advice for this project to be successful and finish. I am very grateful for all of this and for finishing my project. I wouldn't be able to do any of this without their help and supervision, and I want to thank them for it.

I appreciate and thank TIET for giving us the chance to work on an Omni solutions startup idea (an app for detecting falls in the elderly) and for all the help and advice they gave us, which helped us finish the project on time. I really appreciate the department's help and support.

I want to thank our project guide, **Dr. Husanbir Singh Pannu**, from the bottom of my heart. He was very interested in our project work and helped us every step of the way until we finished it by giving us all the information we needed to make a good system.

1.OPPORTUNITY ANALYSIS

1.1 OPPORTUNITY IDENTIFICATION

India has more than 150 million elderly people, and that number is expected to almost double by 2050. As more people live alone, more people move to cities, and more people live in nuclear families, the risk of medical emergencies going unnoticed, especially falls, has become very high. According to health data, falls are the most common cause of death and disability from injuries in people over 60 around the world, and the same is true in India.

The main issue we found is deceptively simple: when an older person falls or has a sudden medical emergency at home, there is often no one there to help, and the person may not be able to call for help because they are physically unable to do so. SOS buttons, personal emergency response systems (PERS), and smartwatches are all examples of existing solutions that have a major flaw: the user has to consciously trigger an alert. In a real fall or a sudden health problem, this is exactly what the person who is affected can't do.

Our primary research, a survey of 184 respondents, validated this issue across various dimensions. 37% of the people who answered said they had seen an older person fall at home in the last two years. 34.2% said that the medical emergency response was late. In the meantime, many of the devices that are already in use are often flagged for sending too many false alarms (37% of respondents said this was a problem), which makes caregivers tired and leads to the devices being used less and less.

There is a clear, urgent, and unmet need in the market for elderly safety: a system that automatically detects emergencies without requiring any action from the person at risk.

1.2 SOLUTION PROPOSED

Omni Solutions is an AI-powered platform for keeping seniors safe. It uses machine learning models on devices and multi-sensor hardware like accelerometers, gyroscopes, and radar to automatically find falls and voice-based distress signals. When the system detects something, it sends encrypted emergency alerts to the right caregivers and emergency contacts within seconds, without needing any input from the elderly user.

There are two parts to the platform: a mobile app and home hub for consumers and an institution-grade caregiver cloud dashboard for hospitals, nursing homes, and assisted-living facilities. The solution works completely in the background, watching for emergencies without anyone knowing about it and keeping privacy standards very high.

1.3 UNIQUENESS OF THE SOLUTION

Omni Solutions is different from other products because it has a fully automatic detection system. Smartwatches and SOS pendants need the user to press a button to work, but our system turns on by itself as soon as it sees a fall pattern or hears a distressed voice. The user doesn't have to do anything. Also, our own AI models are designed to reduce false alarms as much as possible. This is one of the most common problems with current devices, according to 40.2% of our survey respondents. The system uses a multi-sensor fusion method that combines motion data with sound inputs to make it more accurate and tell the difference between real emergencies and normal physical activity.

The platform also seamlessly connects the individual consumer market with the institutional healthcare market. It has a B2C app for family caregivers and a full B2B console for hospitals and elder-care facilities. All of these apps are powered by the same detection engine. The privacy-first design makes sure that there is no continuous audio recording or data sharing without consent. This addresses the 41.3% of people who said privacy and data misuse were their top concerns.

1.4 PROBLEMS THAT WILL BE SOLVED BY OUR SOLUTION

Omni Solutions directly addresses four related issues that we found in our research: Delayed emergency response: 32.6% of people who took the survey said that the biggest problem was that help arrives too late during emergencies. From the moment of detection, our system cuts down the time it takes to send an alert to just a few seconds.

27.7% of people who answered said that older people often forget or can't physically press the emergency button. Omni Solutions gets rid of this need completely.

False alarms and device abandonment: 26.1% of people who answered said that too many false alarms were a major problem with current solutions. Our multi-sensor AI method cuts down on false positives by a lot, which makes the system more reliable and trustworthy.

27.7% of respondents said that devices make them uncomfortable or that they just don't use them. We get rid of the need for the elderly user to wear or carry any extra device by letting the solution run on their current smartphones and home hubs.

1.5 IDENTIFICATION OF USERS AND CUSTOMERS

Omni Solutions has two main types of users and customers:

● End Users (B2C): People over 60, especially those who live alone or in semi-independent settings. A big part of this group is patients who have had surgery and are at high risk of falling when they go home from the hospital.

● Decision Makers / Buyers (B2C): Family caregivers, usually adult children of elderly parents, are responsible for keeping an eye on their relatives' safety and often live apart from them. This group stood out in our survey data, with 22.8% of respondents saying they lived apart from their elderly relatives.

● Institutional Customers (B2B): Hospitals, nursing homes, elder-care facilities, and assisted-living organizations that need monitoring solutions that can grow with them and make up a large part of our revenue through institutional contracts.

1.6 HOW WILL USERS BE BENEFITED BY THE SOLUTIONS

Passive, always-on protection that doesn't require elderly people to remember, wear, or turn on anything is good for them. If an elderly person falls or is in trouble, help is automatically called within seconds. This shortens the time frame during which they could be lying alone.

The cloud dashboard helps family caregivers keep an eye on their elderly relatives, no matter where they are in the world. It shows real-time activity status, alerts, and activity history. This greatly lowers the stress of caregivers without them having to be there in person.

The institution-grade monitoring console is good for hospitals and care facilities because it lets them keep an eye on multiple residents from one place, automatically raise alerts, and keep records to make sure care quality is up to standard, all without needing more staff at the monitoring end.

1.7 HOW WILL USER DISCOVER AND ADOPT THE SOLUTION

Our go-to-market strategy uses two channels to reach both consumers and institutions at the same time. For B2C users, we will use direct-to-consumer digital channels like app store listings, social media campaigns aimed at people aged 26 to 45 (the main caregivers who make decisions), elder-care influencers and online communities, and partnerships with insurance health plans that let people add the cost of the device to their existing coverage.

For B2B acquisition, we will work with hospital procurement teams and managers of assisted living facilities through dedicated account managers, clinical demonstration programs, and pilot contracts.

Government or medical certification, which 27.7% of our survey respondents said was the most important trust factor, will be actively sought to speed up the adoption of the system by institutions. NGO networks and community outreach programs for seniors will be reliable middlemen, especially for first-generation adoption in semi-urban and tier-2 markets, where digital acquisition channels don't work as well.

1.8 HOW MARKET SEGMENT WILL GET AFFECTED BY THE SOLUTION

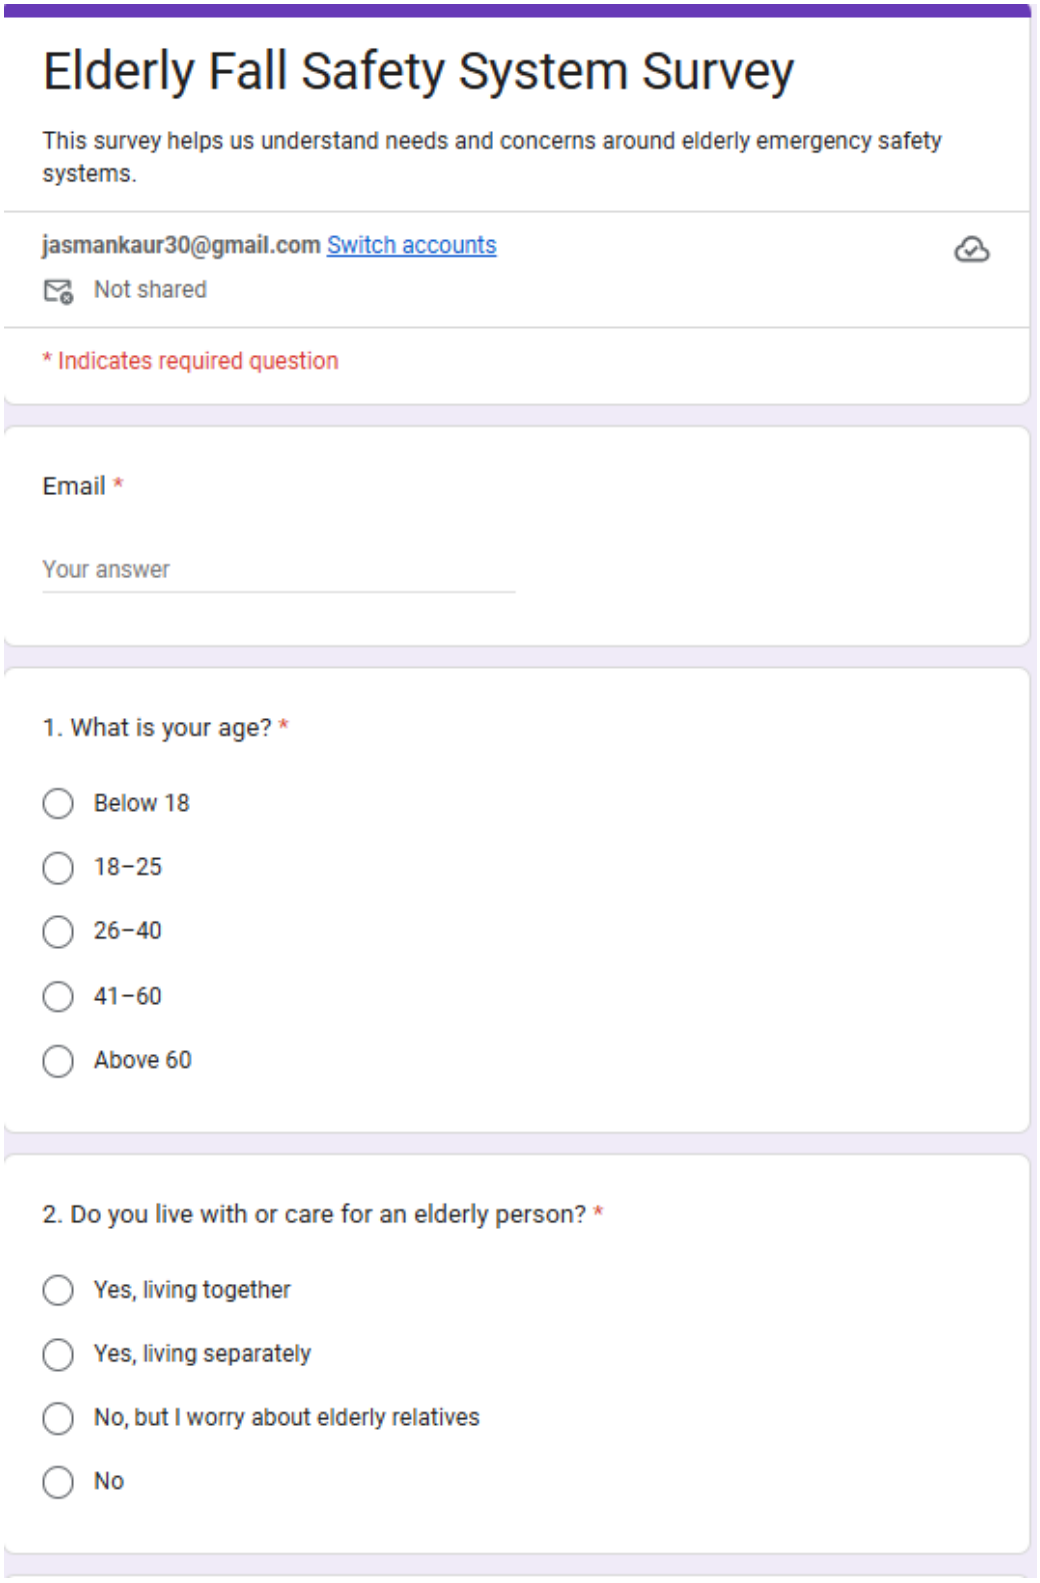

The market for technology that helps care for the elderly in India is at a turning point. There is a big, addressable demand for solutions like Omni Solutions because of demographic pressures, more people knowing about fall-related injuries, and caregivers becoming more worried.

Our solution is set up to make a big difference in the market in two ways. First, it changes the standard for what an elderly safety device must do by moving the standard from manual SOS to automatic detection. This will raise the bar for the whole category and speed up the end of old button-based devices. Second, by combining institutional and consumer use cases on one platform, we create a network effect. For example, hospitals recommend our system to patients who are being discharged, and family caregivers who already use our B2C app then push for institutional adoption at the care facilities where their relatives are staying.

There is also a big structural opportunity in the insurance sub-segment. We can create a financially aligned distribution channel that helps people adopt devices on a large scale by working with insurance companies that know that faster emergency response leads to lower claim values and better health outcomes. Overall, Omni Solutions could make automated fall detection a standard part of care for older people in India, just like smoke detectors became a standard part of homes. This would completely change the way older people are kept safe.

2.CUSTOMER VALIDATION SURVEY

2.1 Sample form used for customer survey

Elderly Fall Safety System Survey

This survey helps us understand needs and concerns around elderly emergency safety systems.

jasmankaur30@gmail.com Switch accounts

Not shared

* Indicates required question

Email *

Your answer

1. What is your age? *

- Below 18
- 18–25
- 26–40
- 41–60
- Above 60

2. Do you live with or care for an elderly person? *

- Yes, living together
- Yes, living separately
- No, but I worry about elderly relatives
- No

3. Have you personally experienced any of the following in the last 2 years? *

- [ ] Elderly fall at home
- [ ] Medical emergency where help was delayed
- [ ] False alarm from an existing device
- [ ] No such incident

4. What do you currently rely on during emergencies? *

- ◯ Nothing specific
- ◯ Phone calls to family
- ◯ Smartwatch / SOS button
- ◯ Caregiver / neighbor
- ◯ Other system

5. What is the single biggest problem with the current solution? *

- [ ] Help arrives too late
- [ ] Elderly forgets or can't press SOS
- [ ] Too many false alarms
- [ ] Device is uncomfortable / unused
- [ ] Cost
- [ ] No problem / not using anything

6. Our system automatically detects falls and distress words. What worries you MOST? *

- [ ] False alarms
- [ ] Missing a real emergency
- [ ] Privacy / data misuse
- [ ] Technical failure
- [ ] Nothing, sounds reliable

7. Which feature matters MOST to you? *

- ◯ Automatic fall detection
- ◯ Voice-based emergency detection
- ◯ One-tap SOS
- ◯ Real-time location sharing
- ◯ Hospital / ambulance integration

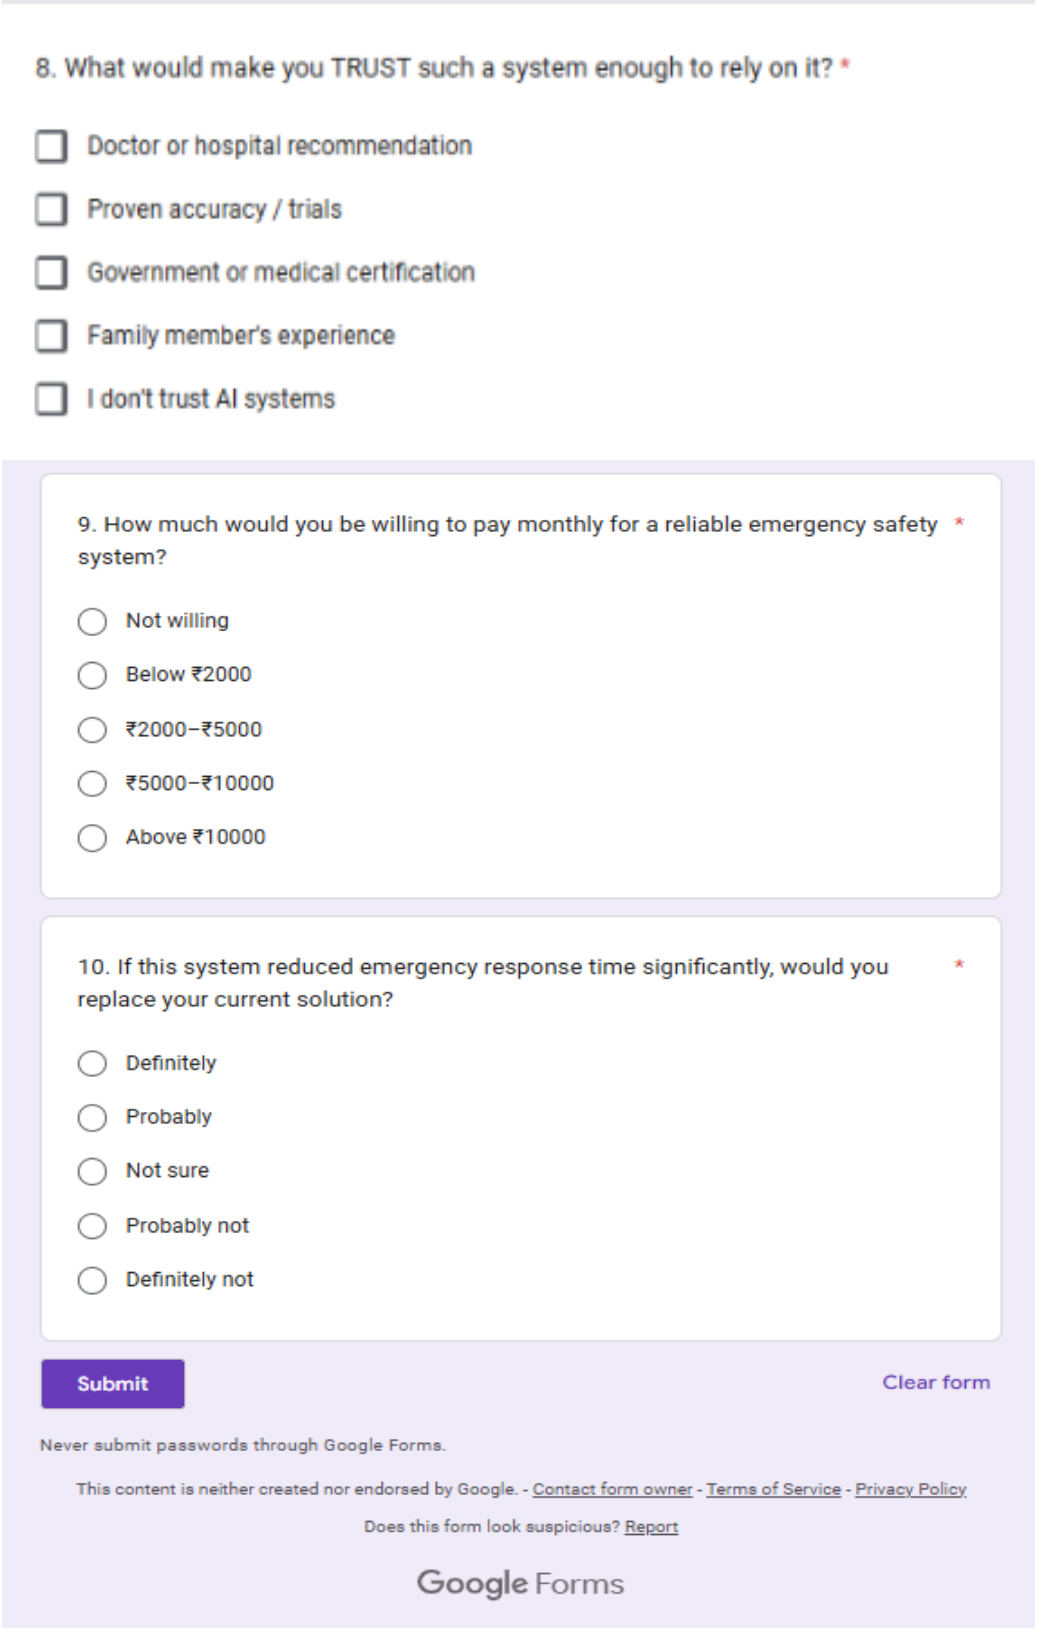

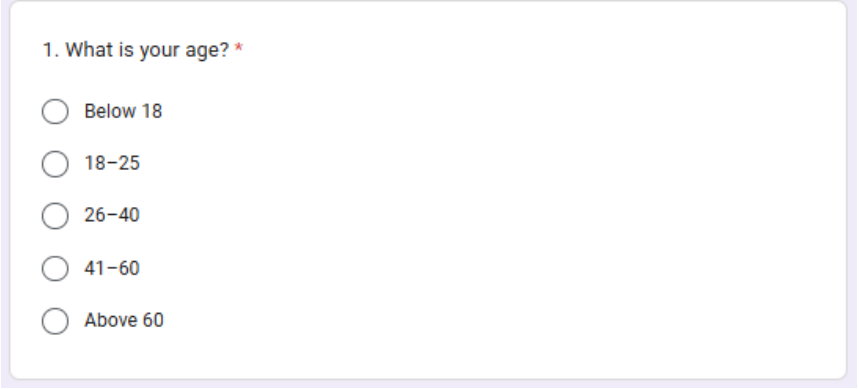

Fig.2 Customer Survey used for Omni Solutions

2.2 Size of the customer survey and its documentary proof

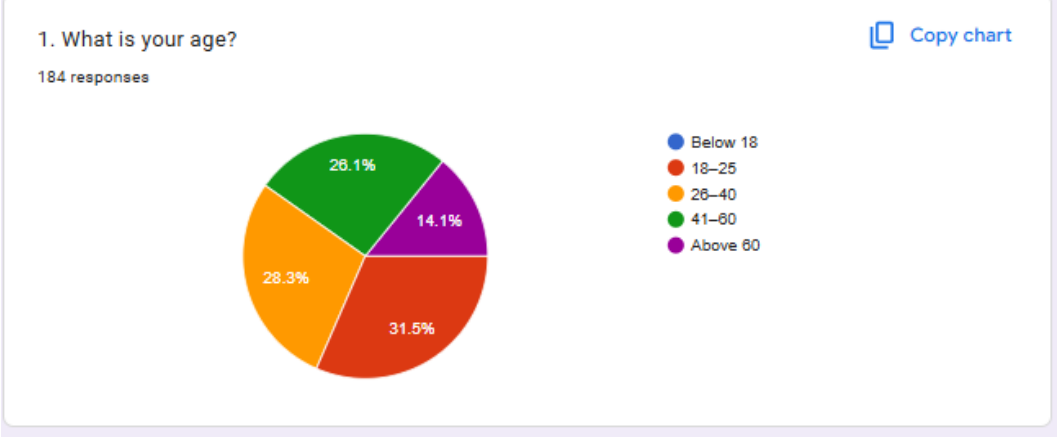

A total of 184 people answered the survey. Our target audience for the survey is the same as the people who use Omni solutions, which was mostly made for older people. Most of the people who took the survey are current university students. The responses were gathered via a Google Form disseminated throughout the university through WhatsApp and Gmail.

2.3 Result of the survey

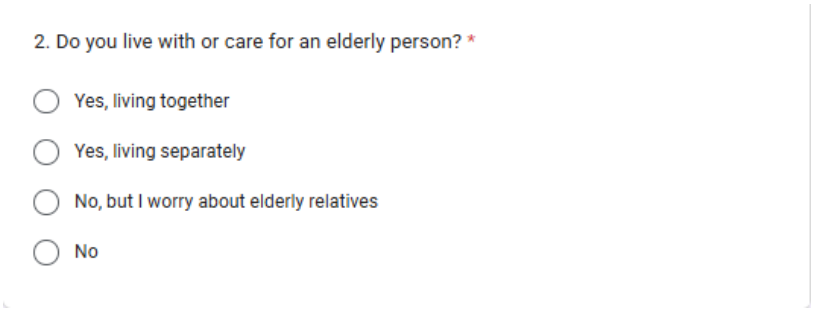

Question-1:

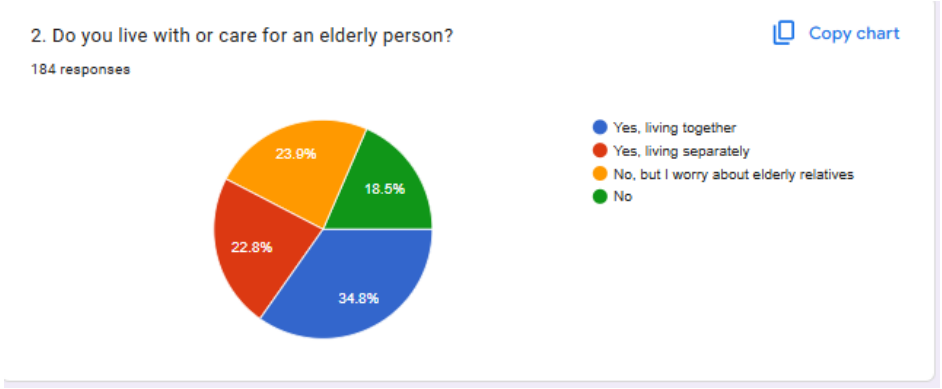

Responses:

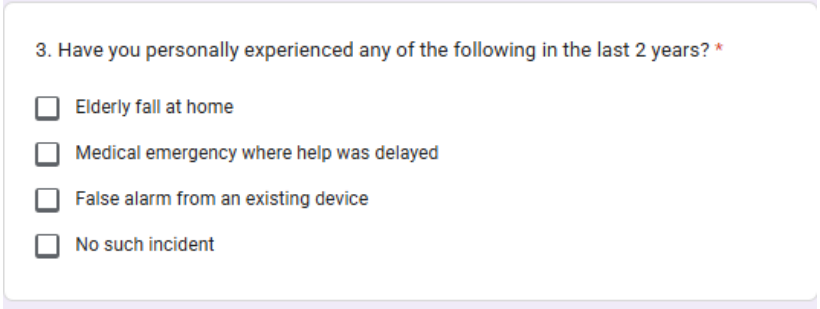

Question-2:

Question-3:

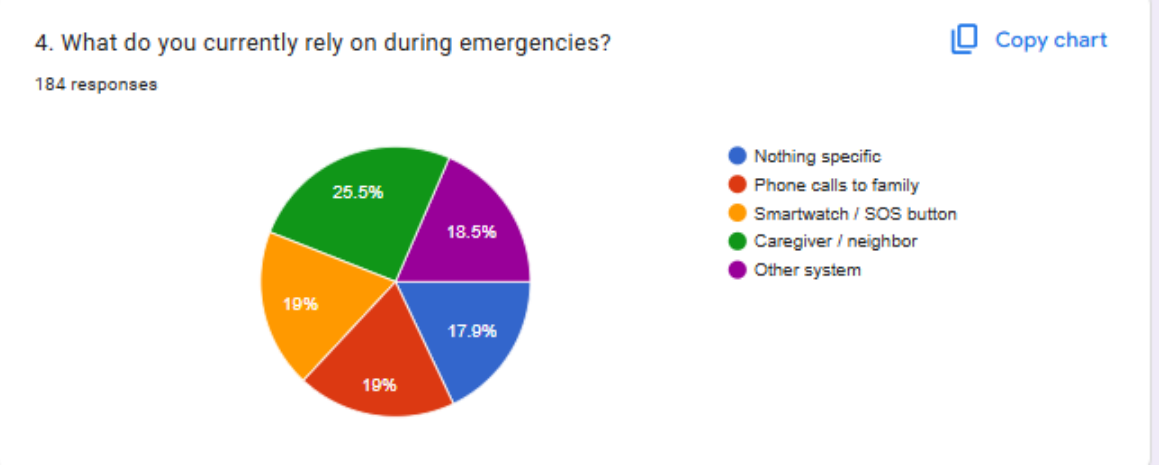

Responses:

4. What do you currently rely on during emergencies? *

- ◯ Nothing specific
- ◯ Phone calls to family
- ◯ Smartwatch / SOS button
- ◯ Caregiver / neighbor
- ◯ Other system

Responses:

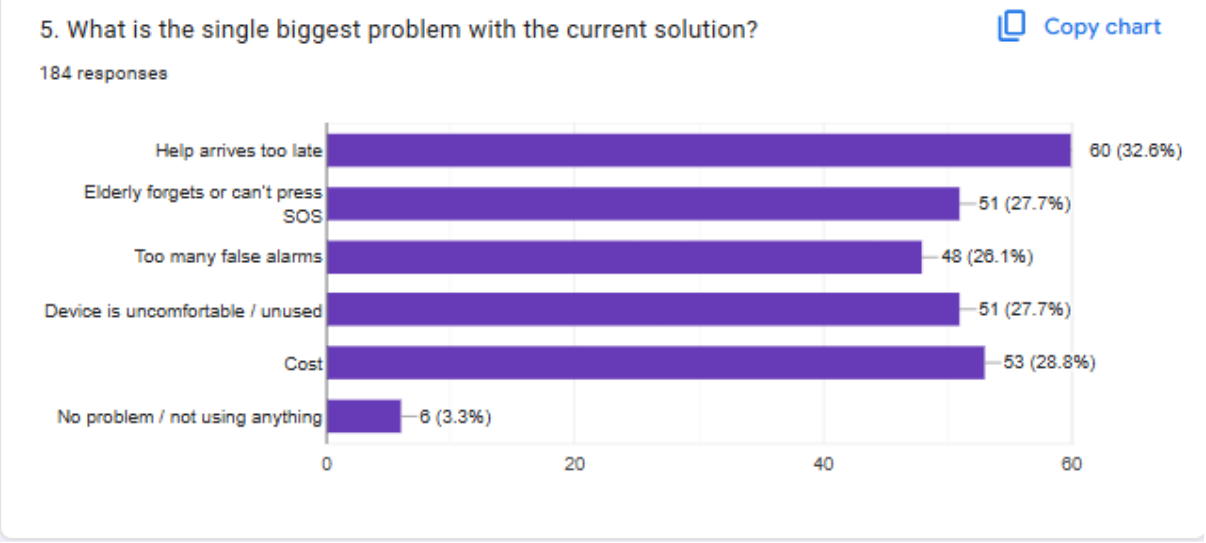

Question-5:

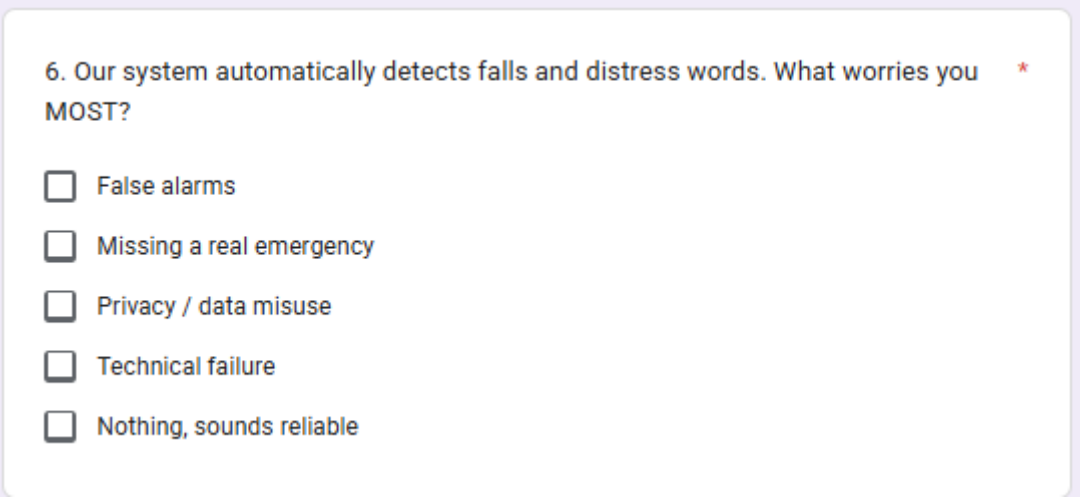

5. What is the single biggest problem with the current solution? *

- ☐ Help arrives too late
- ☐ Elderly forgets or can't press SOS
- ☐ Too many false alarms
- ☐ Device is uncomfortable / unused
- ☐ Cost
- ☐ No problem / not using anything

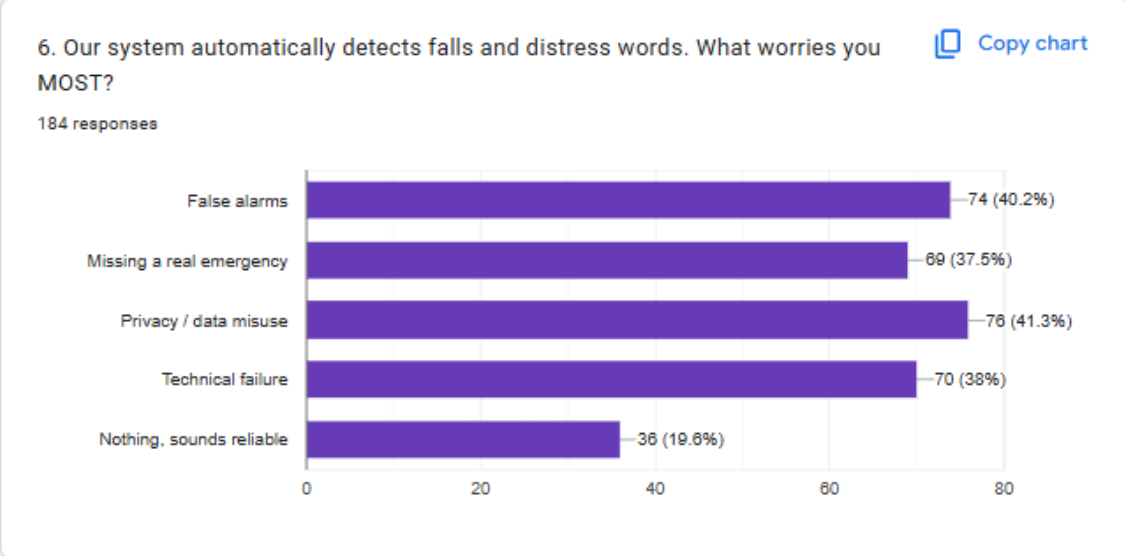

Responses:

Question-6:

Responses:

Question-7:

7. Which feature matters MOST to you? *

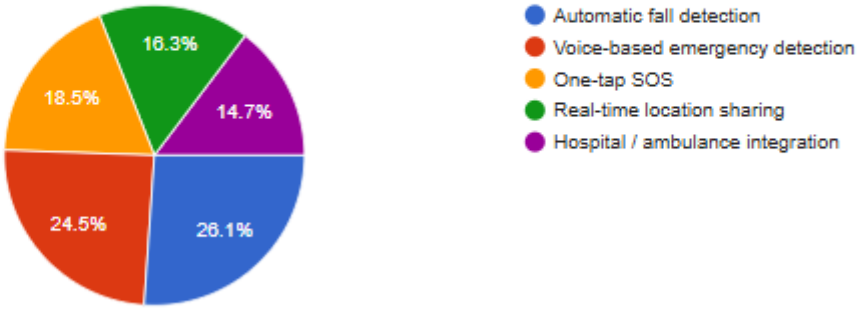

- ◯ Automatic fall detection
- ◯ Voice-based emergency detection
- ◯ One-tap SOS
- ◯ Real-time location sharing
- ◯ Hospital / ambulance integration

Responses:

7. Which feature matters MOST to you?

184 responses

Copy chart

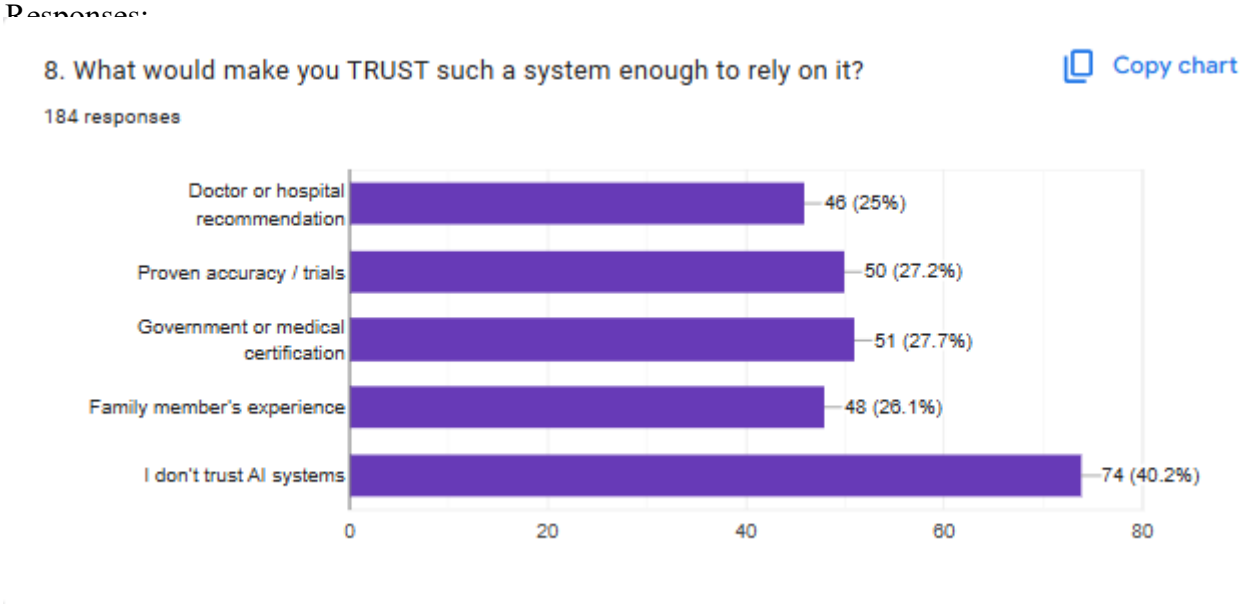

Question 8:

8. What would make you TRUST such a system enough to rely on it? *

- ☐ Doctor or hospital recommendation
- ☐ Proven accuracy / trials
- ☐ Government or medical certification
- ☐ Family member's experience
- ☐ I don't trust AI systems

Responses:

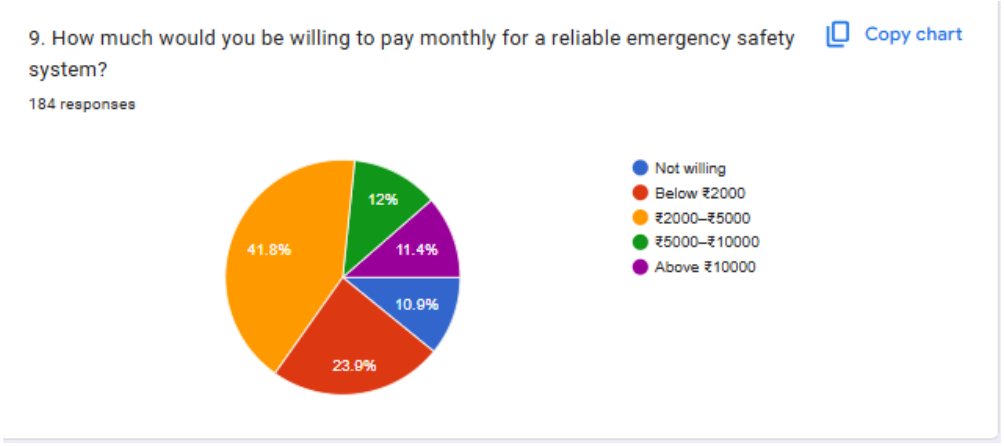

Question-9

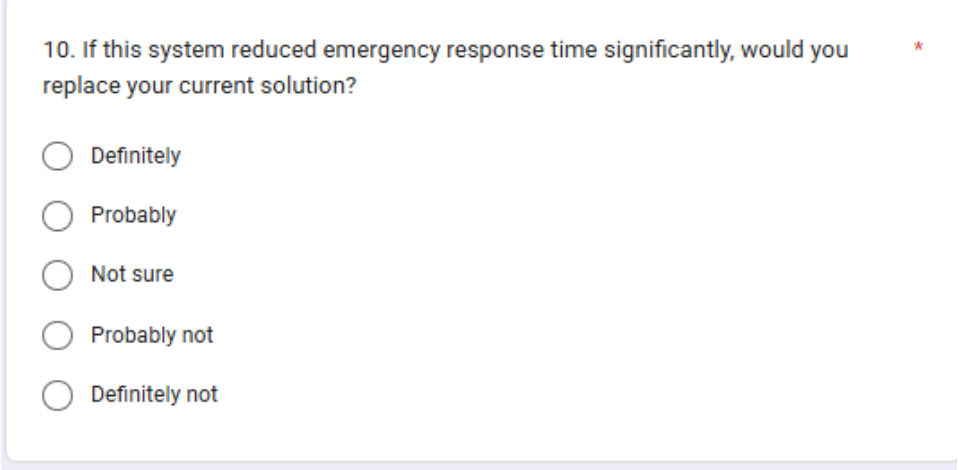

9. How much would you be willing to pay monthly for a reliable emergency safety system? *

- Not willing
- Below ₹2000
- ₹2000–₹5000
- ₹5000–₹10000
- Above ₹10000

Question-10

Responses:

2.4 Detailed Analysis of Survey

Q1 & Q2. Demographics and Caregiver Profile

The respondents were evenly spread out across age groups. The 18–25 (31.5%) and 26–40 (28.3%) age groups together made up almost 60% of the responses. This is directly in line with our B2C target market: adult children and young caregivers who buy things for older relatives. It's important to note that 81.5% of those who answered either live with an elderly person (34.8%), care for one from a distance (22.8%), or worry about elderly relatives (23.9%). This shows that our target market is large and emotionally driven.

Q3. Personal Experience with the Problem

The fact that 37% of respondents had seen an elderly person fall at home and 34.2% had to wait for medical

help shows that the problem Omni Solutions is trying to solve is not just a theory; it is something that many of our target audience members have experienced. These are not unusual experiences; they are worries that almost all families who care for someone have.

Q4 & Q5. Current Reliance and Core Pain Points

The fact that there is no one best way to deal with emergencies is telling. Responses are spread out among caregivers and neighbors (25.5%), phone calls to family (19%), smartwatches/SOS buttons (19%), other systems (18.5%), and nothing specific (17.9%). The pain point data is more telling: the top issues are late help (32.6%, 60 responses), cost (28.8%, 53 responses), inability to press SOS (27.7%, 51 responses), and device discomfort/non-use (27.7%, 51 responses). Omni Solutions directly addresses all of these issues through automatic detection, passive monitoring, and a tiered pricing model.

Q6. Concerns about Automatic Detection

Privacy and data misuse (41.3%, 76 responses) and false alarms (40.2%, 74 responses) were the two biggest worries about AI-based detection systems. Technical failure (38%, 70 responses) and missing a real emergency (37.5%, 69 responses) were also big worries. Only 19.6% said they were sure the system would work without any problems. These results directly influenced our product design priorities, which include on-device processing to cut down on data transmission, an encrypted cloud architecture, and a multi-sensor fusion model to cut down on false positives. These are not things that will keep people from using it; they are things that must be done in the design.

Q7. Most Valued Feature

Automatic fall detection (26.1%) and voice-based emergency detection (24.5%) make up more than half of all responses, which shows that the market really values our core product features. One-tap SOS, the main feature in competing products, came in third at 18.5%, followed by real-time location sharing (16.3%) and hospital/ambulance integration (14.7%). This shows that users are already looking beyond old solutions.

Q8. Trust Drivers

The most interesting thing to note is that 40.2% of the people who answered (74 people) said they don't trust AI systems, which is a big reason why people don't want to use them. This is true, but it is important to note that government or medical certification (27.7%, 51 responses), proven clinical accuracy (27.2%, 50 responses), family member experience (26.1%, 48 responses), and doctor recommendations (25%, 46 responses) are all ways to build trust that can be acted on. For Omni Solutions, regulatory approval and clinical trials are not just nice to have; they are necessary for business.

Q9. Willingness to Pay

A shocking 41.8% of people said they would be willing to pay ₹2,000–₹5,000 a month for a reliable emergency safety system. This backs up our monthly SaaS subscription pricing model and gives us a strong base for our B2C pricing strategy. There is a clear premium tier opportunity when you add in the 12% who are willing to pay ₹5,000–₹10,000 and the 11.4% who are willing to pay more than ₹10,000. Only 10.9% of people don't want to pay, which shows that the business is very likely to succeed.

Q10. Switching Intention

45.6% of people who answered said they would definitely (15.2%) or probably (30.4%) switch to a new solution if Omni Solutions cut down on the time it takes to respond to emergencies by a lot. Another 40.2% are still unsure, which is the group that our marketing and trial programs need to focus on converting. Only 7.6% said probably not, and 6.6% said definitely not. This shows that very few people are actively against switching.

2.5 Conclusion of the Survey

The survey definitively identifies three fundamental insights for Omni Solutions. First, the problem is real and affects a lot of people. A lot of families with caregivers of all ages have had falls (37%), delayed emergency response (34.2%), and abandoned devices. Second, the market is ready for a solution that automatically finds emergencies. Privacy (41.3%) and accuracy (40.2%) are the main reasons people would buy the product, not the main reasons they wouldn't. Third, 53.2% of respondents are willing to pay ₹2,000 or more per month, which shows that there is a market for a subscription model. The survey also shows how important regulatory certification and clinical validation are for building trust before entering the market, especially in institutional channels.

3. FINANCIAL MODEL

3.1 COST STRUCTURE

Setting up Omni Solutions: The first year of investment (based on ₹10 lakh in seed capital):

INITIAL INVESTMENT

S.No.	Expense	Amount(₹)
1.	Prototype & Hardware Manufacturing (sensors, wearable units)	300,000
2.	Research & Data Acquisition	150,000
3.	AI & Firmware Development	250,000
4.	Mobile App & Cloud Platform Development	175,000
5.	RFID & IoT Infrastructure	150,000
6.	Regulatory Compliance & Approvals	150,000
7.	Sales, Marketing & Caregiver Onboarding	125,000
8.	Miscellaneous & Contingency	100,000
	TOTAL INITIAL INVESTMENT	₹1,400,000

Table 1. Initial Investment of Omni Solutions

3.2 REVENUE STRUCTURE

Omni Solutions makes money in five ways: by selling hardware for devices once, by offering monthly or yearly subscriptions to B2C SaaS, by signing contracts with hospitals and elder-care facilities for B2B services, by offering premium caregiver dashboard tiers, and by partnering with insurance companies to share data.

EXPENSES	Ist Year (₹)	IInd Year(₹)	IIIrd Year(₹)
Device Sales (Hardware)	419,940	1,399,800	4,199,400
B2C Subscriptions (₹3,000/month avg.)	81,552	353,392	1,168,912
B2B Institutional Contracts	360,000	900,000	2,160,000
Premium Dashboard Tiers	72,000	150,000	400,000
Insurance Data Partnerships	-	80,000	300,000
TOTAL REVENUE	993,492	2,883,192	8,228,312

Table 2. Revenue Structure of Omni Solutions

Assumptions: Year 1 - 60 B2C subscribers, 2 institutional contracts. Year 2 - 200 B2C subscribers, 5 institutional contracts. Year 3 - 600 B2C subscribers, 12 institutional contracts with expanded hardware distribution.

3.3 PROFIT LOSS STATEMENT

EXPENSES	Ist Year (₹)	IInd Year(₹)	IIIrd Year(₹)
Hardware Manufacturing & Procurement	198,000	660,000	1,980,000
Prototype+AI Model	1,200,000	0	0
AI & Software Maintenance	50,000	150,000	400,000
Cloud Hosting & Infrastructure	36,000	150,000	600,000
Regulatory & Compliance	150,000	75,000	150,000
Sales, Marketing & Onboarding	125,000	400,000	1,200,000

Manpower (Tech + Support)	360,000	900,000	2,100,000
Miscellaneous	50,000	100,000	250,000
TOTAL EXPENSES	2,169,000	2,435,000	6,680,000

Table 3. Profit/Loss statement of Omni Solutions

***ASSUMPTIONS**

Ist Year	27 B2C subscribers; institutional contracts
IInd Year	98 B2C subscribers; 5 institutional contracts
IIIrd Year	324 B2C subscribers; 12 institutional contracts with expanded hardware distribution

Table 4. Assumptions of Initial Investment of Omni Solutions

3.4 CASH FLOW STATEMENT

	Ist Year (₹)		**IInd Year (₹)**		**IIIrd Year (₹)**	
CASH AT BEGINNING OF YEAR	**0**		224,492			
CASH FLOW FROM OPERATIONS	24,492		448,192		1,548,312	
CASH FLOW FROM FINANCIAL ACTIVITIES	INVESTMENT FROM INVESTORS	140,000	INVESTMENT FROM INVESTORS	0	INVESTMENT FROM INVESTORS	0

	RETURN TO INVESTORS	0	RETURN TO INVESTORS	0	RETURN TO INVESTORS	0
	TOTAL	140,000	**TOTAL**		**TOTAL**	0
CASH FLOW FROM INVESTING ACTIVITIES	-120,000		0		0	
NET INC/DEC IN CASH	224,492		448,192		1,548,312	
CASH AT END OF THE YEAR	224,492		672,684		2,220,996	

Table 5. Cash-Flow Statement of Omni Solutions

4. Reflections

This course helped our team grow a lot by working on Omni Solutions. What started as a conversation about how worried our families are about their elderly relatives turned into a structured opportunity analysis, a proven business model, and a financial plan that we believe in.

The most important thing we learned is that finding a problem is only the first step. The real work is figuring out if the problem is widespread, consistent, and urgent enough to build a business around. We got this confirmation from our survey of 184 people, but it also brought up issues we hadn't fully thought through, especially about trust in AI systems and the importance of regulatory certification for any adoption path.

One of the most important skills we learned from this project was how to use survey data to make decisions about product design. For example, 41.3% of respondents said they were worried about privacy, which not only confirmed a user worry but also became a hard limit on how we built our cloud architecture. The willingness-to-pay data of ₹2,000 to ₹5,000 per month also gave us a real base for our subscription pricing instead of just making an assumption.

We also learned how to split ownership without losing understanding by working as a six-person team

across all chapters of this project. Each person took a part of the pitch and a part of the report, but we all looked at and questioned every part together. Even though they were informal, the debates we had about whether hospitals or families would be our main source of income were some of the most helpful strategic conversations we had.

The problems we faced were just as helpful. It was harder than we thought to get a diverse and representative group of people to take the survey. To do this, we had to go beyond our immediate university network and include working professionals and older people themselves. We had to make assumptions about the financial model's pricing because we didn't have enough real-world data. We had to write them down and defend them instead of treating them as facts.

Some important skills that were learned during this business venture are:
Finding, making, and judging real market opportunities through primary research.
Finding different stakeholders and making a value proposition based on evidence.
Creating a financial model that strikes a balance between ambition and realistic, documented assumptions.
Understanding the rules and requirements for building trust as business needs, not extras.
Learning how to pitch ideas to a wide range of people, both technical and non-technical, and improving your soft skills
.Understanding the basics of entrepreneurial thinking, such as empathy, iteration, and resilience.
Omni Solutions taught us that being an entrepreneur means being very empathetic. You need to understand a user's problem well enough that they trust your solution and make a business model that can handle the challenges of bringing that solution to market. We leave this course with more than just a project report; we also have a way to think about problems and solutions that we plan to use in the future.

Business Model Canvas
Omni Solutions

Date: 31/03/26
3C31_4

Key Partners
- Hospitals & elder-care institutions
- Hardware manufacturers (sensors, wearables)
- Cloud & AI infrastructure providers
- RFID & IoT component suppliers
- Regulatory & compliance consultants
- Family caregiver networks & NGOs
- Insurance companies (data-driven risk)
- Research Institutions & Universities

Key Activities
- On-device ML model training & updates
- Hardware R&D and prototype testing
- Mobile app & cloud dashboard development
- Regulatory approval management
- Caregiver onboarding & support

Key Resources
- Proprietary AI / fall-detection models
- Multi-sensor hardware (acc, gyro, radar)
- Encrypted cloud platform & APIs
- Healthcare regulatory licenses
- ₹10 L initial investment capital

Value Proposition
- Automatic fall detection, no user action needed
- Emergency alerts within a few seconds
- Fewer False alarms
- Privacy-safe first
- Works on smartphones + home hubs
- Caregiver cloud dashboard for remote monitoring
- Encrypted emergency alerts
- Institution-grade monitoring console

Customer Relationships
- Self-setup app with guided onboarding
- 24/7 alert notification system
- Monthly caregiver satisfaction surveys
- Institutional account managers
- Community & family caregiver support groups

Channels
- Direct B2C: app stores & website
- B2B: hospital procurement teams
- Caregiver & elder-care influencers
- Insurance & health plan bundles
- NGO & senior-citizen community outreach

Customer Segments
- Elderly individuals (60+) living alone
- Post-surgery & high-fall-risk patients
- Family caregivers (decision makers)
- Hospitals & nursing homes
- Elder-care & assisted-living facilities

Cost Structure
- Prototype & hardware manufacturing
- AI & firmware development
- Mobile app & cloud platform
- RFID infrastructure
- Regulatory compliance & approvals
- R&D & accuracy testing
- Sales, marketing & onboarding

Revenue Streams
- Device sales (one-time hardware)
- Monthly/annual SaaS subscriptions (B2C)
- Institutional contracts (B2B hospitals)
- Caregiver dashboard premium tiers
- Insurance data partnerships & analytics
